MAGNETIC MRO TO LAUNCH A NEW DEDICATED PAINTING HANGAR IN TALLINN AIRPORT

News / Maintenance / Trainings

Magnetic MRO, a total technical care provider headquartered in Tallinn, Estonia is to launch its second painting hangar in 2017.

The new dedicated painting hangar will be built in co-operation with Tallinn Airport, in response to growing demand for painting services from Magnetic MRO customers.

A Letter of Intent has been signed and preparations have started to build the 2000 square-meter hangar with further expansion possibilities.

The new hangar will be capable of housing aircraft in size up to Boeing 737MAX9 and Airbus 321neo, as well as regional aircraft. Equipped with an overhead crane for lifting aircraft engines, the hangar will be suitable for both painting and ad-hock maintenance activities. Much like the existing painting facility, the new hangar will have a Spraybooth Technology Limited (STL) system.

To ensure the highest level of service quality, painting equipment will include Sherwin-Williams, AkzoNobel, PPG and Mankiewicz systems. Scaffolding solutions are designed by Lahyer and are equipped with lighting to enable the best painting conditions possible.
