MILLION AIR AND AVFUEL BRING SUSTAINABLE AVIATION FUEL TO AUSTIN

News / Business aviation

Million Air Austin (KAUS) and Avfuel Corporation came together to boost sustainable aviation operations at Austin Bergstrom International Airport with the addition of sustainable aviation fuel. The SAF—which went into service on November 20, 2025—provides a meaningful solution for operators seeking to reduce lifecycle greenhouse gas emissions from flight operations. This marks the first SAF location in Texas for both companies, offering a consistent supply of SAF specifically for the airport's business and general aviation traffic.

Roger Woolsey, CEO of Million Air Interlink commented: "Austin is a thriving, business-centric city that also deeply values environmental responsibility. Bringing SAF to Million Air Austin is about giving our customers meaningful options that align with both their travel needs and their sustainability goals. At Million Air, we believe sophistication and responsibility go hand-in-hand, and this step in our Beyond Green initiative reflects our commitment to making choices that support both our customers and our planet."

Mark Haynes, Avfuel's vice president of sales stated: "The Million Air team has been an

exceptional partner to work with in expanding sustainable fuel solutions. We're proud to collaborate with them to establish our first consistent SAF-supplied location in Texas and help further their corporate initiatives on sustainability."

The SAF, originating in Texas, has a targeted blend percentage of 30% neat SAF to 70% traditional jet fuel. For every 8,000-gallon truckload of fuel, the SAF provides a 19 metric ton reduction in carbon emissions over the fuel's lifecycle compared to petroleum-based jet fuel. This is equivalent to the amount of carbon sequestered by 19.1 acres of U.S. forests per year. In its neat (pre-blended) form, SAF has the potential to reduce greenhouse gas emissions by up to 80% compared to traditional jet fuel.

This initiative is part of Million Air's Beyond Green sustainability program—a company-wide commitment to responsible aviation practices. The Beyond Green platform focuses on integrating more sustainable solutions across Million Air's network, from renewable energy investments and facility efficiencies to greener fuel options, like SAF. Million Air Austin joins Million Air Albany (KALB), which partnered with Avfuel to bring SAF online this summer.

SAF is made from renewable and sustainably sourced waste materials, like used cooking oil. Once blended with conventional jet fuel, SAF is a drop-in solution that meets ASTM D1655 specifications and performs to the same standards as traditional jet fuel—requiring no changes to aircraft, fuel infrastructure or handling procedures.
