

AIRWAYS AVIATION AND SYMBIOTICS PARTNER TO HELP PREPARE FUTURE PILOTS

News / Maintenance / Trainings

Airways Aviation, a provider of world-class pilot training, and Symbiotics, experts in psychometric assessment for the aviation industry, have partnered to support cadets by providing their ADAPT assessment ahead of commercial pilot training. Airways Aviation operates one of the largest fleets of privately owned training aircraft worldwide. Their vision is to train, educate, shape, and deliver a new generation of aviation industry professionals as they assert themselves as a dominant private provider of quality aviation education and training globally for civilian and military customers.

Symbiotics has a deep understanding of the aviation industry's unique requirements and the critical skills, attributes, and competencies needed in aspiring pilots. Both organisations will work together using Symbiotics' ADAPT assessment suite to ensure a confident selection process, whilst supporting Airways Aviation with their commitment to providing a higher level of professional pilot training.

Airways Aviation Global COO and CCO Alexandre Alves commented: "Having such a geographical dispersion, working with different aeronautical regulations, with airlines, whitetail

students, military customers and other stakeholders brings a lot of challenges to Airways Aviation operations. One of the challenges is to maintain a standard of quality in all regions of the world. Despite originally having assessment processes in place, we concluded they were not providing enough reporting or assessing all the topics we needed. Knowing the ADAPT assessments and in particular the Symbiotics team behind it, Airways Aviation management concluded it was the solution we needed. This will allow us to have an assessment standard globally and provide detailed reporting to our B2B customers feeling comfortable we are enrolling the best future pilots and cabin crew possible.”

Symbiotics’ Technical Director, Richard Brecknell said: “We are delighted to be working with the Airways Aviation team to support them with their vision to train, educate and shape a new generation of industry professionals. ADAPT assessments have been developed by both our psychology team and in-house development team and will enable Airways Aviation to ensure they are providing a consistently high level of selection ahead of delivering pilot training. Our new partnership will support Airways Aviation in their aspirations by providing detailed reporting to their B2B customers and supporting them in maintaining a global standard of quality. We look forward to a successful partnership in 2023 and beyond, helping the Airways Aviation team to help to deliver the significant number of qualified pilots that are much needed by the industry. “
