

CZECH AIRLINES TECHNICS SIGNED NEW AGREEMENT WITH AUSTRIAN AIRLINES

News / Airlines, Maintenance / Trainings

Continued interest in aircraft maintenance at Prague Airport has been confirmed as Czech Airlines Technics (CSAT) signed a new contract with another major customer. CSAT management has entered into a base maintenance agreement with Austrian Airlines. Based on successful tender, won by CSAT, the company will perform overhauls of a total of 13 Airbus A320 family aircraft. Despite several operational changes by air carriers, lessors, and other aircraft operators in connection with the resumption of operations post the pandemic, over 100 projects were successfully completed last season.

“Pursuing the course of our long-term strategy, we confirm further co-operation with an important aircraft base maintenance customer. Last year, we won several new clients, and we continue to work for our long-term partners from airlines and leasing companies this year. Following that, our hangar capacity is fully booked for the ongoing base maintenance season,” Pavel Haleš, Chairman of the Czech Airlines Technics Board of Directors, said.

Based on the latest agreement concluded with Austrian Airlines, CSAT will provide Airbus A320 family narrow-body aircraft base maintenance using one of its production lines in Hangar F. Its team will perform a total of six overhauls this season. During the following year, seven more aircraft will arrive in Prague for the planned checks. “We build on our 2019 co-operation with the Austrian national carrier, member of the Lufthansa Group, which will continue thanks to the new long-term agreement at least until 2023. We value the fact that Austrian Airlines has chosen Czech Airlines Technics and our services once again,”

Pavel Haleš added.

“To ensure that our aircraft always complies with the highest standards on safety and security we focus on long standing, regional cooperation with trusted partners. We are pleased to be able to renew our agreement with Czech Airlines Techniques for another two years,” said Francesco Sciortino, Austrian Airlines’ Chief Operational Officer.

Last season, Czech Airlines Technics completed over 100 base maintenance overhauls of Boeing 737, Airbus A320 Family and ATR aircraft. Concurrently, CSAT successfully performed first maintenance jobs on Boeing 737 MAX and Airbus A321neo. The company received approvals to perform maintenance checks of both most modern narrow-body aircraft types from the Czech Civil Aviation Authority in the first half of 2021. Finnair, Transavia Airlines, Neos and Austrian Airlines are among the most important Czech Airlines Technics clients in the base maintenance division long-term. In 2021, a team of CSAT mechanics also worked on projects for LOT Polish Airlines, Swedish airline Novair and other clients comprising leasing companies and representatives from both the government and private sectors.
