

EMBRAER SIGNS CONTRACT WITH VORTEX AIRCRAFT SERVICES TO ONBOARD BEACON

News / Maintenance / Trainings

Embraer signs a contract with Vortex Aircraft Services for the use of Beacon, the maintenance coordination platform connecting resources and professionals for faster return-to-service aircraft. Vortex Aircraft Services specializes in AOG and scheduled maintenance events, will use Beacon to enhance maintenance coordination and responsiveness to AOG services, simplify communication around maintenance events of all types of aircraft models, increase team productivity and efficiency, improve knowledge exchange, and streamline workflows.

Marco Cesarino, Head of Beacon commented: “As a fleet-agnostic platform, Beacon is an ideal partner for Vortex, a company providing maintenance and repair services on a broad range of aircraft from different original equipment manufacturers. Every minute counts in aviation. Beacon will help Vortex improve their coordination efficiency of AOG events and field maintenance, foster more effective collaboration, and maintain their high standards of quick response to critical maintenance events.”

By onboarding Vortex, Beacon is expanding its presence within the U.S. maintenance and repair

market and complementing Vortex standards for service excellence for both their commercial and private aviation customers.

Luis Osuna, Director of Maintenance, said: “We firmly believe in strengthening the quality of work and response for our customers. The Beacon platform aligns with our vision to expand in Charlotte, NC, which remains a strategic location for Vortex and its customers as a hub for air carriers and all operations traveling through the Southeast United States. By joining Beacon, we continue to make our relationship more dynamic between our customers and us so we can keep them flying.”
